How to create a visual report

Showing examples of fake news

fake news is said to represent
a step-change in information warfare; an emerging form
of cynical profiteering; an engine for energising
“alt-right” and other digitally mediated grassroots
political mobilisations around the world; a partisan battle
cry for a new liberal “ministry of truth”; an unwanted
byproduct of the online platforms which organise our
digital societies; or a canary call signalling a collapse of
consensus around established institutions and processes
of knowledge production, heralding a new “post-truth”
era in politics and public life.

According to some commentators fake news is just old
wine in new bottles

TYPES OF INFORMATION DISORDER

FALSENESS

INTENT TO HARM

**SATIRE OR PARODY**

No intention to cause harm but has potential to fool

**MISLEADING CONTENT**

Misleading use of information to frame an issue or individual

**IMPOSTER CONTENT**

When genuine sources are impersonated

**FABRICATED CONTENT**

New content is 100% false, designed to deceive and do harm

**FALSE CONNECTION**

When headlines, visuals or captions don't support the content

**FALSE CONTEXT**

When genuine content is shared with false contextual information

**MANIPULATED CONTENT**

When genuine information or imagery is manipulated to deceive

	 SATIRE OR PARODY	 FALSE CONNECTION	 MISLEADING CONTENT	 FALSE CONTEXT	 IMPOSTER CONTENT	 MANIPULATED CONTENT	 FABRICATED CONTENT

BROADBILLS

EURYLAIMIDAE World 15 species; Borneo is a hot-spot with 8 species, including 2 endemics. The three green *Calyptomena* broadbills (illustrated next page) are almost exclusively fruit eaters. The remaining five broadbills (illustrated opposite) are primarily insect-eaters with varied habits. Borneo hosts many of the world's largest insects including giant leaf eating stick insects. The insectivorous broadbills use their wide beaks to grab break up and swallow their giant prey. Sexes are similar. All broadbills build round pendulous nests usually overhanging a ravine or gully, easily mistaken for a dangling epiphyte and difficult for a predator to access. Dusky and Long-tailed Broadbills are co-operative breeders and are nearly always seen in groups. The remaining three insectivorous broadbills are believed to be pair breeders, with both sexes co-operating in nest building. They are only occasionally seen in groups. Broadbill calls are worth learning. The Black and Yellow and the closely related Banded Broadbill have very distinctive and unusual calls which are a characteristic sound of the Bornean lowlands. All the broadbill species need primary forest to survive, for example, there are no broadbills left in Singapore.

MALAY: BURUNG TAKAU

- 1 DUSKY BROADBILL** *Corydon sumatranus* 25cm
The least common of the insect-eating lowland broadbills. Found in primary forest of the lowlands and hills where it hunts in family groups for large insects and lizards in the top of the tree canopy. Often crepuscular (Bruce in del Hoyo). Look for distinctive large pink bill and streak on back is often concealed. **Sabah:** Poring, Kinabatangan, Tabin, Danum. **Brunei:** Extremely uncommon (Mann) but widespread including records from Kuala Belait, Sarawak: Mulu, Similajau, Semenggoh. **Kalimantan:** Kayan Mentarang, Kotu, Gog Palung. **Call:** A series of six to eight screaming notes, rising up the scale *hi-ky-ul ky-ul ky-ul* (Lambert). **Range:** Vietnam to Malay P., Sumatra, Borneo.

Scarcely resident

- 2 BLACK-AND-RED BROADBILL** *Cymbirhynchus macrorhynchus* 23cm
Often seen in pairs along forested river banks from the coast to the interior. The nest is suspended from a branch over the water with the appearance of detritus trapped by a dangling liana in a flood. Sometimes flies down to pick up food such as freshwater crabs or fish from the water's edge. **Call:** Not very vocal. 'The typical call is a monotonous *ryook, ryook, ryook*' (Batchelor). 'Monotonous rasping *urark urark* is a monotonous *ryook*, and briefer than Black-and-Yellow Broadbill' (McKinnon). **Range:** Myanmar, Thailand, Malay P., Sumatra, Borneo.

Common resident

- 3 BANDED BROADBILL** *Eurylaimus javanicus* 21cm
Much larger and less common than the Black and Yellow Broadbill, but with similar habits, a similar call and a similar distribution in forest areas throughout Borneo. Distinguished by lack of a white collar. Male has distinctive ruff on chest. **Call:** A buzzing trill similar to the call of the Black-and-Yellow Broadbill but starts with an introductory whistled *whewo*, accretes more rapidly and cuts off more abruptly' (Lambert). **Range:** Malay P., Sumatra, Borneo, Java.

Common resident

- 4 BLACK-AND-YELLOW BROADBILL** *Eurylaimus ochromalus* 15cm
Commonest broadbill, found in all types of forest from lowland to hills throughout Borneo. Hunts for insects in small parties in the middle canopy of the forest. A loose flock of 10 to 15 birds seen, in which they bowed their heads sharply whilst calling (Thompson). Often joins mixed species hunting parties. Distinctive bright plumage includes yellow eye ring and white collar. **Call:** Very distinctive accelerating buzzing trill heard throughout the day. Once learnt never forgotten. **Range:** Myanmar, Thailand, Malay P., Sumatra, Borneo.

Common resident

- 5 LONG-TAILED BROADBILL** *Psarismomus dalhousiae* 25cm
Inhabits submontane forest from Kinabalu south along the central mountains of Borneo where it is locally common. Usually seen in active, small parties hunting for insects. Look for very distinctive head pattern. Male has yellow spot on nape (Lean Y.L.). In flight has prominent white panel on underside of wings. **Call:** 'Each call is a series of five to eight sharp whistles *pit pit pit pit* all on the same pitch and falling in tone' (Davison). **Sabah:** Seen regularly in the Crocker Range. **Brunei:** No records. **Sarawak:** Mulu, Kelabit Highlands. **Kalimantan:** Recorded from 1,700m on Gng Lunjut, Kayan Mentarang (van Balen). **Range:** From the Himalayas to mountains of Malay P., Sumatra, Borneo.

Local submontane resident

Phobaeticus chani
"Chan's megastick"
(56 cm)

“ Insofar as **we focus on providing procedures** for inquiry **rather than pictures** of the phenomena, this guide may also be considered a kind of “recipe book.”

Presentazione

Le lasagne alla Bolognese sono un piatto tipico della gastronomia dell'Emilia Romagna e, nello specifico, della città di Bologna. Nonostante la paternità di questa ricetta sia Emiliana, le lasagne sono conosciute a tal punto da diventare uno dei simboli della cucina italiana nel mondo e conosce numerose e prelibate [varianti](#). Dalla preparazione agli ingredienti, questa

ricetta è la quintessenza della "ricchezza" della cucina tradizionale bolognese, celebre anche per molte altre ricette di pasta fresca e non solo, basti pensare allo [gnocco fritto](#). Per preparare una buona lasagna alla Bolognese la cosa fondamentale è la giusta scelta

Ingredienti per una teglia 20x30 cm

- Lasagne Verdi all'uovo sfoglie 21
- Parmigiano reggiano da grattugiare 250 g

PER IL RAGÙ ALLA BOLOGNESE

- Carne di suino macinata (molto grassa) 250 g
- Manzo polpa tritata 500 g
- Passata di pomodoro 250 g
- Carote 50 g
- Cipolle 50 g
- Sedano 50 g
- Latte intero 40 g
- Olio extravergine d'oliva 1 cucchiaino
- Sale fino q.b.
- Pepe nero q.b.
- Vino bianco 250 g
- Acqua 3 l

PER LA BESCIAAMELLA

- Latte intero fresco 1 l
- Burro 100 g
- Farina 00 100 g
- Noce moscata da grattugiare q.b.
- Sale fino 1 pizzico

Preparazione

Come preparare le Lasagne alla Bolognese

Per preparare le lasagne alla bolognese cominciate tritando finemente al coltello il sedano (1), la carota sbucciata e spuntata (2) e la cipolla mondata (3) in modo da ottenere 50 g per ciascun ingrediente.

Scaldate l'olio in un tegame e aggiungete il trito di verdure, stufate per una decina di minuti a fuoco dolce mentre mescolate, di tanto in tanto (4). Trascorso il tempo il soffritto dovrà risultare appassito ed il fondo del tegame asciutto. Unite la carne di manzo macinata grossa (5) ed il macinato di maiale (la pancetta fresca, una parte molto grassa) (6).

HOW MAY WE CHARACTERISE THE SOURCES OF TROLL-LIKE ACTIVITY?

BEFORE STARTING

For this recipe we take as a starting point the 25 accounts that mention at least one political leader at least 100 times identified in the previous recipe (we discarded one account because it was no longer active).

CONVENTIONS USED IN THE BOOK

In this book we use the 👁️ (eye) symbol to indicate visual results, the 🛠️ (wrench) to point to the tools glossary and the → (arrow) to point to the concepts glossary. To avoid distracting our readers we only use the glossaries icons to mark the first occurrence per recipe of the term or tool explained in glossaries.

Furthermore, each recipe in our chapters is introduced by a diagram, or a method map, representing the key analytical steps taken to arrive at our results. In each method map, arrows represent actions and icons represents their results. You can see the steps in the method maps as possible ingredients for your own recipes.

Some recipes lead to multiple outcomes. When this is the case you will find at the beginning of the recipe a complete method map for the entire recipe (on a blue background), and the parts relevant to each individual step in the recipe highlighted on a white background at the beginning of each recipe alongside the description of the relevant step.

Below you can find a list of all the icons we use for the methods maps.

A dataset in the form of a table.

Any kind of visualization, such as a bubble graph or a network diagram. See the Concepts Glossary for the full list of visual models used in this guide.

A list. This could be, for example, a list of websites, or a list of Facebook pages.

A screenshot. Usually taken from a web browser with the aim of preserving a snapshot of a web page.

A corpus of images. A set of images captured with the same method.

User profile. It represents all the information related to a user in a social network. For example in Twitter the user profile contains the @name, the description, the profile picture.

Temporal information. Could be, for example, the creation time of a Facebook post.

Hashtag. Used in many social networks, for example in Twitter and Facebook.

ACTIONS

Sometimes, relevant actions have their own icons. Below you can find the full list of them.

Automatic operations. Used to highlight when an action (e.g. dividing items into categories) is performed by a machine.

Manual operations. Used to highlight when an action (e.g. dividing items into categories) is performed by a human being.

Image comparison. It is used to highlight when the analyst must visually compare a corpus of images.

Union of lists. When two or more lists are merged into one.

this information may be accessed via public pages). Online platforms have their own ways of organising the boundaries between public and private. And in the case of fake news, we also have to deal with the consequences of technological fixes to the phenomenon on possibilities to study it. In the case of Facebook, measures to remove problematic posts from the platform mean that researchers are unable to examine how users engaged with these items. How platforms, regulators, policy-makers, users and others negotiate these unfolding questions of the configuration of these emerging spaces of publicity and privacy, their attendant mechanisms of accountability, remains to be seen.

Beyond questions about how digital landscapes are studied, organised and reshaped, we hope this guide may also serve as inspiration for how digital methods may be used to study and intervene around data politics in the contemporary moment. Who will have the capacities to shape how data is created and used? How can data be used to not only to close debate but to enrich it? How can different kinds of data help us to pursue objectivity not just through a single picture, but through a plurality of different perspectives? How does the configuration of digital infrastructures shape what is hearable, sayable, seeable and doable with data? Who and what will stand to benefit from the data society? *The Field Guide to Fake News* is the first of an ongoing series of activities and experiments with the Public Data Lab through which we hope to continue to explore these themes.

TOOLS GLOSSARY

In this section we provide brief descriptions and links to various tools that are referenced throughout the field guide. These descriptions are intended to be sufficiently informative to enable readers to follow the text. It should be noted that it is very important in any research project or investigation to develop an appreciation of precisely how they work and what they do (and what they do not do). Hence we advise you to refer to the documentation and more detailed descriptions on the websites listed below before using them in your own project.

- ✂ **BuzzSumo:** a social analytics service which enables users to explore the most “engaged” content relative to a given topic or domain. You can filter the results by language, country, word count and content type (article, infographic, interviews, videos). (<http://buzzsumo.com/>)
- ✂ **CorText:** an online application used to analyse textual data. It allows users to create various types of statistical and network visualisations. (<http://www.cortext.net/>)
- ✂ **CrowdTangle:** digital tool that allows users to track how content spreads through the web and follow the performance of posts and accounts on Facebook, Twitter, YouTube, Instagram and Vine. (<http://www.crowdtangle.com>)
- ✂ **CSV Rinse Repeat:** a JavaScript based tool to clean and

Chapter 1

The focus is on circulation because false and misleading knowledge claims are not born “fake news”. To become fake news they need to mobilise a large number of publics – including witnesses, allies, likes and shares, as well as opponents to contest, flag and debunk them.

ARE DEBUNKING WEB PAGES ACKNOWLEDGED BY THE PUBLICS OF FAKE NEWS?

Fake news pages and debunking web pages have different publics on Facebook. Only six of the public pages that share fake news stories have acknowledged web pages which aim to debunk them in our CrowdTangle dataset. While Google looks to prioritise debunking web pages, on Facebook it is fake news stories that circulate better. While both progressive and conservative pages share fake news stories it is primarily progressive Facebook pages and those pertaining to journalists and fact-checking initiatives that share web pages which aim to debunk fake news stories.

Criminalize Conservatism

Read the damn news

HOW DOES THE STORY "RAGE AGAINST THE MACHINE TO REUNITE AND RELEASE ANTI DONALD TRUMP ALBUM" TRAVEL ON FACEBOOK?

Trajectory of "Rage Against the Machine to Reunite and Release Anti Donald Trump Album" story on Facebook pages and groups retrieved with CrowdTangle. The story circulates best between March and June 2016 as satire amongst English language music and entertainment groups. It is revived in November after the US elections, when it is also picked up by Italian music and political pages.

Chapter 2

**Fake news are not just “false news”.
They are interesting not so much
because their content or form are
different from that of “authentic
news”, but because they travel as
much as (and sometimes more than)
mainstream news**

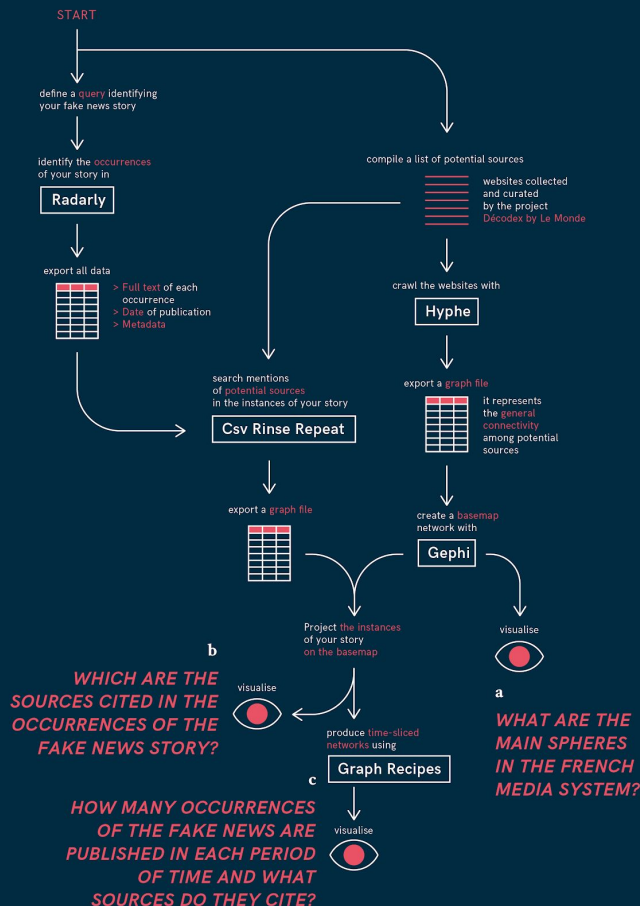

WHICH ARE THE MOST VISIBLE SOURCES RELATED TO A FAKE STORY? WHEN AND BY WHOM ARE THEY MENTIONED?

BEFORE STARTING

This recipe enables a scaling up of the approach presented in the previous recipe, but requires a bit more technical knowledge, as well as some bigger datasets. In particular, you will need to have access to:

- ◇ A web archive (we used 🦋 **Radarly** by Linkfluence).
- ◇ A list of all the possible web sources in which your chosen fake news story may have appeared (we used the list curated by 🦋 **Le Monde Décodex**).

To illustrate this recipe, we focus on a false story that circulated during the 2017 French presidential election and referred to the presumed homosexuality of Emmanuel Macron.

Network analysis of the media sources active in French public debate. The image shows the news sources listed by the Décodex project by *Le Monde* and the hyperlinks connecting them. A force-directed layout has been applied to reveal the main clusters of websites and their respective associations and positions.

HOW MANY OCCURRENCES OF THE FAKE NEWS STORY ARE PUBLISHED IN EACH PERIOD AND WHAT SOURCES DO THEY CITE?

Temporal evolution of the fake news story in the whole observed period.

In this image, the occurrences of the fake news story are divided in slices of 4 weeks (with an overlap of two weeks) and represented as a density heat map rather than as individual points. Though mentions of the story have been present for more than one year, its circulation appears to spike up in February 2017, when a new strand of the fake story is published by the Russian website *Sputnik International*.

Chapter 3

Many websites use “trackers” – small bits of embedded code – in order to monitor engagement, including visitor numbers, visitor behaviour and the effectiveness of ads

DO MAINSTREAM MEDIA AND FAKE NEWS WEBSITES SHARE THE SAME TRACKER ECOLOGIES?

Scatterplot representing tracker usage on a series of fake news and mainstream media sites. While fake news sites and mainstream media sites share popular tracker services such as Google AdSense, DoubleClick and Google Analytics, mainstream media sites appears more mature and sophisticated in its use of trackers in terms of the number and diversity of trackers that it uses.

HOW DO FAKE NEWS SITES AND MAINSTREAM MEDIA CLUSTER ACCORDING THEIR TRACKER USAGE?

Bipartite network of trackers and websites that use them. Shared tracker signatures may be used to explore tracker practices or strategies amongst a set of websites or to detect fake news "media groups."

Chapter 4

**We shall use the term
"memetic activity" in this section to
designate the multiple ways in which
users act around memes online,
including circulating, imitating
and transforming them**

Network of nouns and adjectives co-occurring in images posted in 2016 on Breitbart's Facebook page (two words are connected if they are present in the same image). Colors identify clusters according to Louvain modularity. The two most prominent clusters are centered around Donald Trump (top, blue) and Hillary Clinton (bottom, yellow). One may examine the terms present in the Hillary Clinton cluster and in clusters in its proximity in terms of framing and agenda setting.

Chapter 5

Tactics such as trolling and the use of bots and “sock-puppet” accounts have been linked to the spread of political disinformation and propaganda online

HOW CAN WE CHARACTERISE SOURCES OF TROLLING ACTIVITY BASED ON THEIR PROFILE INFORMATION?

Clustering of 24 accounts engaging in troll-like activity around the Dutch elections. The profile information is clustered according to similarities. Three users have very similar profiles and are created in a short amount of time: this helps us to identify them as 'sock-puppet' account created for trolling activities. Other six promote the same anti-islam agenda, but without being fake accounts.

Thanks!
